PUBLIC HEALTH DEPARTMENT, FORD STREET,

DERBY,

June, 1929.

TO THE CHAIRMAN AND MEMBERS OF THE HEALTH COMMITTEE OF THE COUNTY BOROUGH OF DERBY.

MR. CHAIRMAN, LADIES AND GENTLEMEN,

I have the honour to submit the Annual Report on the health of the inhabitants of your Borough for the year 1928.

The year under review shows many features of interest, some gratifying and others disappointing. The general death-rate for the year was low, being only a decimal higher than that of the year 1920, when the rate was the lowest recorded, while the infantile mortality for 1928 is actually the lowest recorded in the history of the Borough. The birth-rate was the highest for the past five years. With regard to the principal causes of death, those from Heart Disease head the list in numbers, Cancer and Old Age respectively coming next in order.

The most unsatisfactory statistical record is the increase in Maternal Mortality figures. Details of these are given in the Report, and a systematic inquiry is being made throughout the country as to the causation of the deaths of mothers in connection with childbirth. It is to be hoped that accumulated evidence which is now being obtained will lead to a considerable reduction in the number of deaths under this heading. During the year 46 children were left motherless as the result of these deaths. The tragedy of the death of a mother of a young family need hardly be emphasised, and the special attention now given to the matter, not only in medical and public health circles, but also by politicians, can be understood.

Smallpox continued to prevail throughout the year and was of the mild type which has been prevalent throughout the country. One of the principal factors in its spread has again been the difficulty of obtaining full and accurate information as to the "close contacts" of cases. We rarely obtain notification of a case of Smallpox until the eruption is three or four days old, unless the case happens to be a known contact kept under supervision. As persons suffering from the disease, after the premonitory symptoms feel perfectly well on the appearance of the eruption (which is often of so apparently trivial a character that little attention is paid to it at first, with the result that infection is spread before it is recognised), the importance of getting hold of cases before they become infectious is absolutely essential.

Powers have been sought under the new Corporation Bill of 1929 requiring that necessary information should be furnished in the case not only of smallpox, but also other infectious diseases, when it is deemed necessary that this information is required to prevent the spread of the disease. Failure to furnish such information and the giving of false information will be liable to a penalty. I am quite certain that it is the intention of the Health Committee to enforce these powers when they become law.

Smallpox is sometimes referred to as a "filth disease," but this is a mistaken and mischievous idea, and causes a good deal of distress on the part of sufferers from the disease, on account of this undeserved stigma, and leads to concealment of cases. During the Inquiry with regard to our Improvement Schemes in connection with a slum clearance held in October of the year, Counsel for one of the owners of some of the property in one of the areas tried to make a strong point of the fact that no smallpox had occurred in the area, consequently, there was no need to deal with the houses. This gentleman had quite a wrong idea of the causation of smallpox; the disease has affected some of the cleanest persons living in the cleanest houses in the town.

During the year the Borough was extended in accordance with the Derby Corporation Act of 1927, and the population increased by 8,441. The housing and conditions as to water supply, drainage, etc., in some of these added areas are receiving attention with a view to remedying such unsatisfactory conditions as exist.

A commencement was made during the year with the conversion of tub closets within the Borough, under the provisions of the Derby Corporation Act, 1901. 572 were converted to water closets under

the Corporation's scheme by the end of the year, and at the time of writing the majority of these unsavoury places have been dealt with.

An additional "Welcome" for Mothers and Babies was established in the Nottingham Road District for this area, the population of which has greatly increased owing to the large number of new houses that have recently been built in the vicinity. It is hoped to establish at an early date an up-to-date Welfare Centre in connection with the School Clinic to be attached to the Nottingham Road Council School: also to erect additional buildings in connection with the Nightingale Road School, to render the premises suitable for a "Welcome" for the neighbourhood.

Further steps have been taken to increase the accommodation for patients at the Isolation Hospital and the building of a new Nurses' Home, and it is anticipated that building operations will be commenced for providing these very essential establishments during the current year.

An important feature of the year's work was the first attempt of the Corporation to deal with two slum areas within the town. Details of the conditions of these areas will be found in the body of the Report and special attention might be invited to the higher death rates, higher infantile mortalities, the larger number of deaths from tuberculosis and pneumonia respectively recorded in these areas as compared with the rest of the Borough. The need for such slum clearances or improvement schemes will be admitted, I think, by everyone. It was unfortunate that, owing to legal difficulties, the efforts of the Corporation were, for the time being at any rate, nullified.

Attention might again be called to the great amount of work done in reconditioning the houses in the Borough, under the direction of Mr. Ford, Chief Sanitary Inspector.

With regard to the future, it is hardly necessary to refer to certain matters of urgent importance, such as the need for new Health Offices, more suitable accommodation for maternal and child welfare work, etc., as these needs are too well known to need emphasis. I would like to refer briefly, however, to the new Local Government Act of 1929, under which additional powers of farreaching character are given to the Borough Council. The work

now carried on by the two Authorities—the Borough Council and the Board of Guardians respectively—will be combined and these bodies merged into one Local Parliament, a measure which should lead to more unification of the Public Health Services. One important function will be to co-ordinate the work of the new Municipal or "City" Hospital (which has been provided for necessitous persons who are at present dealt with by the Guardians, but will, under the Act, have to be dealt with by the Council) with that of the local Voluntary Institutions, the aim being by consultation and co-operation with the latter to ensure that every citizen of Derby requiring hospital treatment should have facilities for the same without delay. At the same time the autonomy of our fine local hospitals, as voluntary institutions, will be secured, and their work furthered by co-operation and not hampered in their splendid work by undue interference.

As in previous years the Health Department has to thank the voluntary helpers for their valuable help at the weekly meetings of each of our six Welfare Centres, and to many people for gifts to the hospitals, and for information and assistance given in many ways. I should like especially to express the indebtedness of this Department to the nurses of the Derby and Derbyshire Royal Nursing Institution in connection with cases of Pneumonia, Measles complicated with Pneumonia, etc. In every instance in which these nurses have attended, their duties have been carried out with such kindness and efficiency as to receive the approbation of the sufferers and their friends.

In conclusion, I have pleasure in again thanking all my colleagues in the Health Department for their continued loyalty and support, as well as the Town Clerk and other Corporation Officials for their ever ready assistance, and to you, Mr. Chairman and members of the Health Committee for your kind (and often indulgent) consideration and support.

I am,
Mr. Chairman, Ladies and Gentlemen,
Yours obediently,

ALBERT E. BRINDLEY,

Medical Officer of Health.

STATISTICAL SUMMARY.

DEATHS

DEATHS.

Death-rate, 1928 10.95

The total number of Deaths registered during the year was 1,737, as compared with 1,914 in 1927; of these 1,737 deaths, 244 were strangers, and there were 28 deaths of Derby residents registered outside the Borough, making a net total of 1,521. The net death-rate therefore from all causes was 10.95. The net death-rate for 1928 was the third lowest recorded.

BURIALS.

The total burials in the Derby Cemeteries for the year 1928 were 1,503.

MORTALITY AT VARIOUS AGES.

AGE PERIOD 1—5 (67 deaths). Rate per 1,000 of total population 0.48.

Infectious diseases were responsible for a large number of deaths, Measles causing 20, Diphtheria 7, Whooping Cough 4, Enteric Fever, Scarlet Fever and Diarrhœa one each; Pneumonia (8) was likewise a fatal disease. Tuberculous diseases other than pulmonary were the cause of 7 deaths, and one occurred from pulmonary tuberculosis in this age-period. There were 6 deaths from Violence (due to scalds 3, burns, fall and being knocked down by a motor car, one each).

AGE PERIOD 5—15 (46 deaths). Rate per 1,000, 0.33.

The chief contributing causes of death were Other Tuberculous Diseases 8, Diphtheria 6, Violence 4, Pneumonia 3 and Heart Disease 3.

AGE PERIOD 15-35 (116 deaths). Rate per 1,000, 0.84.

Tuberculosis of respiratory system was the most dangerous ailment; 35 deaths were assignable to that cause. Heart Diseases caused 16 deaths, Violence 9 and Nephritis 7.

Age Period 35—45 (101 deaths). Rate per 1,000, 0.73.

Tuberculosis of respiratory system was also the most dangerous disease in this age period, causing 22 deaths. Cancer caused 11 deaths. Heart Diseases and Violence 9 each, Influenza and Nephritis 4 each.

AGE PERIOD 45-65 (409 deaths). Rate per 1,000, 2.95.

The chief causes of death were Heart Diseases 77, Cancer 75, Tuberculosis of respiratory system 40, Cerebral Hæmorrhage 33, Pneumonia 28, Nephritis 25, Arterio-Sclerosis 15 and Bronchitis 14.

AGE PERIOD 65 AND OVER (621 deaths). Rate per 1,000, 4.47.

In the declining years of life Old Age 163, Heart Diseases 138, Cancer 87, Cerebral Hæmorrhage 57, Bronchitis 34, Nephritis 30, Arterio-Sclerosis 22, Pneumonia 15 and Violence 14, were the chief causes of death.

There were 327 persons between 70 and 80 years at death.

,, ,, 133 ,, ,, 80 ,, 90 ,, ,, ,, 11 ,, over 90 years at death.

Ninety-eight was the highest age at death (a female).

^{*}Including Congenital Defects, and Atrophy, Debility and Marasmus.

Inquests held during 1928.—These numbered 109, 77 males and 32 females.

Mortuary.—Dead bodies received during the year, 39, Post mortem examinations, 33

Infantile Mortality.—Of the 161 deaths of babies under the age of one year, 80 occurred during the first month, and of this number 75 per cent (viz., 60) took place during the first week of life.

Influence of Feeding.—The total number of babies who have been under the observation of the Health Visitors from January, 1908, to December, 1927, was 51,045. Of these 73.9% were wholly breast-fed during the first three months of life, 5.5% were wholly hand-fed, and 20.6% were partly reared by hand and partly by natural means. The infantile mortality, or death-rate per 1,000 births, among children wholly breast-fed was 35.5, among the hand-fed it was 154.1, and among those mixed-fed 105.7. The evidence, then, in favour of the breast-feeding of infants, especially during the early months of life, is very great indeed (see pages 60-63).

Excessive Mortality during the year.—Cancer was responsible for 178 deaths during 1928, this being a decrease of eleven, as compared with 189 in the previous year. The average mortality in the quinquennium 1904-8 was 98.6, while that of the quinquennium 1924-28 was 173.4. Heart Disease shews an increase of 39 deaths over the yearly average for the preceding five years, but a decrease of 7 as compared with 1927. Tuberculosis, all forms, showed an increase of 33 over 1927. Decreases compared with 1927 were shown by Influenza 103, Bronchitis 64, and Pneumonia 26.

Deaths ... Nil.

infected Households.—The 212 cases occurred in 146 households (including three Institutions) affected as follows:—

1 case in house, 108 instances, 108 cases. 2 cases 21 ,, ,, 3 7 21 4 4 16 5 1 5 6 1 6 ,, 1 7 ,, ,, ,, in 3 Institutions 7 7

Total 212

Age and Sex Distribution.—110 of the cases were males and 102 females, and the ages varied from a baby aged 8 months to an adult, aged 73 years. Age distribution will be seen on reference to the Tables on pages 16 and 17. From this it will be observed that the majority of cases occurred between the ages of five and thirty-five years. while 53 of these occurred in school children.

Ward Distribution.—The outbreak was general and affected all the wards within the Borough. It is not possible to give the numbers occurring in the various wards, owing to the alteration of Wards and Ward Boundaries which took place on the extension of the Borough on 1st April. 120 streets were affected.

Housing Conditions.—The appended summary shows the housing conditions and sanitary conveniences associated with the 146 affected households. One case occurred in a House Let in Lodgings. Three cases occurred in the Derbyshire Royal Infirmary, 3 in the Guardians' Infirmary, and 1 in the Nightingale Nursing Home. The following particulars relate to 142 houses, left after deducting the 8 latter cases.

Number of Houses affected......142Water closets at houses...139Tub closets at houses...3

Houses wherein the conveniences or amenities were lacking, <i>i.e.</i> , coppers, sinks, water, etc	12	
Houses that could not be called cleanly,		
owing to tenants Houses that possibly under modern	1	
standards had not sufficient room space for occupants	0	
Houses affected that were in congested	Ü	
areas, slums, scheduled houses, courts, back-to-back or not		
through ventilated houses, such as courts in Rawdon Street, Borough's		
Walk, Gisborne Street, Brook Street Queen Street, Leaper Street, etc.	14	
Comparatively modern houses affected		
such as in Arthur Street, Marlborough Road, Uttoxeter New		
Road, Baker Street, Haig Street, Almond Street, Haddon Streeet,		
May Street, Mortimer Street, Derwent Bank, Empress Road, etc	66	
Older houses not in either of above two classes such as Clover Street,		
Parliament Street, Peach Street,		
Osmaston Road, Malcolm Street, Holcombe Street, Olive Street,		
Oxford Street, Manchester Street, Roe Street, Newdigate Street, etc.	62	142

Periodical Incidence.—The quarterly incidence (see page 18) shews that most of the cases were notified in the fourth quarter of the year, i.e., 96, and fewest in the second quarter, i.e., 22. The weekly notifications showed the highest number in the weeks ending 20th and 27th October, when 15 cases were notified. The highest monthly incidence was in the month of October, when 50 cases

were notified, the weekly notifications during this period varying from eight cases in the week ending 13th October to 15 cases in the weeks ending 20th and 27th October. Three weeks were free from the notification of the disease, the longest period in which the borough was free being for seventeen days from 21st August to 8th September.

Monthly Incidence.—The monthly incidence of the disease is seen in the following table.

						h		ł				Total.
17	13	10	6	5	11	19	13	22	50	25	21	212

Vaccinal Condition of Patients.

Total Cases.	Unvaccinated.	Vaccinated in Infancy	Vaccinated later periods.	Vaccinated after infection.
212	155	29	Nil.	28

Relation to Vaccination.—The following statement illustrates the effects of vaccination upon the persons living in the same household as the patient, or who had been in close contact with the latter.

The eight cases mentioned on page 19, which occurred in Institutions, etc., are not included, the number of cases remaining being 204. The total number of contacts in the houses in which these cases occurred was 594. Of these 473 had been vaccinated or had Smallpox some time previously; 10 of these persons subsequently developed Smallpox (0.47%). The number of contacts in the households, who had not been vaccinated or had Smallpox, was 121, and of these 51 (or 42%) developed the disease.

The percentage number of contacts vaccinated was 80 as against 59 in 1926, when there were 759 cases, and 86 in 1927, when 135 cases occurred.

This statement indicates that the percentage of risk of contracting the disease was nearly 90 times greater among the unvaccinated than in those vaccinated at any time.

An analysis of the cases which occurred in people who had been vaccinated at any time showed that no case occurred in any one who had been vaccinated within the past 30 years. A summary of these 10 persons who contracted Smallpox is appended:—

DIPHTHERIA.

Cases notified .	• •	• • •	• • •	• • •	398
Deaths	• •	• • •	•••	•••	16
Case Mortality .	••	•••	•••	• • •	4.0%
Mortality per 1,000	inhab	itants	• • •	•••	0.12%

Bacteriological examination assisted in the recognition of 224 (59%) of the notified cases.

Diphtheria was more prevalent within the Borough during 1928 than in 1927; the number of cases (398) is an increase of 111 compared with the number notified in 1927 (287), and the number of deaths (16) is 3 more than the number of fatal cases in 1927.

Included in the 398 cases are (a) 174 cases notified by medical men in the town on clinical symptoms only; (b) 210 cases notified on the results of bacteriological examinations of throat swabs in suspicious cases of throat illness and of cases with nasal discharge; and (c) 14 cases discovered in school or in the homes of the people, chiefly the "close contact" of notified cases.

Sex.—Males, 166 cases, 6 deaths; females, 232 cases, 10 deaths.

Schools attended by the Fatal Cases.—Eight of the fatal cases were not attending school, the remainder (8) attended school as follows:—Ashbourne Road 2, Reginald Street 2, Trinity 2, Brighton Road 1 and St. James' Road 1.

Antitoxin in relation to Fatal Cases.—Thirteen of the fatal cases were admitted to the Borough Infectious Diseases Hospital, and three were treated at home. In seven cases antitoxin was administered; in nine cases there was no record of its administration, but all cases admitted to the Isolation Hospital receive full doses on admission.

Infected Households.—The 382 cases occurred in 326 households, including 46 in 4 institutions. In 26 households there were 2 cases each, and in 2 instances 3 cases.

Nuisances.—The Visiting Inspectors reported nuisances in 20 houses:

Smells from drains	3	Defective roof	1
Defective drains	2	Damp bedroom wall	1
Defective soft water		Defective spouting	1
pump	2	Defective W.C. cistern	1
Defective ceilings	2	Defective stone sink	1
Insanitary privies and		Defective plaster	1
ashpits	2	Broken W.C. pan	1
Dirty house	1	Water in cellar	1

As far as possible the sanitary defects mentioned above were remedied.

Antitoxin.—Antitoxin was supplied gratuitously, as in previous years, to the medical men practising in Derby. During 1928, the following amounts were supplied:—

59 phials containing 2,000 units each.

170 ,,		,,	4,000	,,

SCARLET FEVER.

Cases notified	•••		• • •	•••	282
Death	• • •	• • •	•••	•••	1
Case Mortality	•••	•••	•••		0.35%
Mortality per 1,0	00 inl	abitan	ts	•••	0.007

The number of cases of Scarlet Fever notified during 1928 was 282, an increase of 28 compared with the number for 1927. There was one fatal case, notified during the previous year, and treated in the Children's Hospital.

Sex.—112 of the 282 cases were males, and 170 females.

Infected Households.—The 282 cases occurred in 253 households, including 7 in 3 institutions. In 19 instances 2 cases occurred in a house, in 1 instance 3 cases, and in one house 5 cases occurred.

Return Cases.—There were two "return" cases occurring in households within one month of the return of a convalescent Scarlet Fever case from the Infectious Diseases Hospital.

Insanitary Conditions.—Sanitary defects were reported by the Visiting Inspector in 15 houses, a percentage of 5·3 of the cases notified.

ENTERIC FEVER.

Total cases notified	• • •	• • •	•••	7
Death	•••	•••	• • •	1
Case Mortality	• • •		• • •	14.3%
Mortality per 1,000 in	habitants		•••	0.007

One case was treated in the Derbyshire Royal Infirmary, the remaining six being treated at home. The fatal case was treated at home.

Blood Examinations.—8 blood specimens were examined for Widal's reaction; 7 of which were negative.

Sex.—Three of the 7 cases were males and 4 females. The fatal case was a female age 21 months.

Age Distribution.—This will be seen on reference to the Tables on pages 16 and 17.

Houses.—The cases of Enteric Fever affected five households, there being three cases in one house.

Sanitary Conveniences.—The infected houses were provided with a tub closet in two instances and with a W.C. in three instances.

A sample of water was taken from the house of one case of Enteric Fever, and on analysis was found to be of satisfactory quality for use for drinking and domestic purposes.

PUERPERAL FEVER.

Cases notified	I	• • •	•••	•••	• • •	21
Deaths .			•••	•••	•••	7

Fourteen of the cases were treated at the Guardians' Institution, and four at the Derbyshire Royal Infirmary. The remainder (three) were treated at home. Ten of the cases were first notified as Puerperal Pyrexia and afterwards also as Puerperal Fever.

A midwife was present at the parturition in nine cases; in seven instances a doctor was present, and five cases were attended by both

doctor and midwife. One of the cases treated in the Guardians' Infirmary was afterwards transferred to the Mental Hospital.

The 21 cases notified included four non-residents (one fatal) whose confinements occurred in local institutions.

PUERPERAL PYREXIA.

60 Cases notified

Thirty-one cases occurred in the Nightingale Nursing Home, 16 were treated in the Guardians' Institution, one in the Derbyshire Royal Infirmary, and one in a private institution. The remainder (11) were all treated at home, in one instance skilled nursing being carried out by arrangements made with the Royal Derby and Derbyshire Nursing Association. Ten cases notified as Puerperal Pyrexia were also notified later as Puerperal Fever.

Included in the 60 notified cases are 10 non-residents, who came into Derby Institutions for confinement.

Eleven of the notified cases of Puerperal Pyrexia died; the causes of death being certified as follows:—

- 1. Puerperal Septicæmia
- 2.Puerperal Pyrexia, Parturition, Influenza
- 3. Septicæmia, Parturition
- Puerperal Septicæmia, Labour 4. month ago, Ulceration and Cellulitis of both legs

					Tota	al	56	cases.

The leg was affected in the fatal case. In addition to the fatal case, two other notified cases of Erysipelas died, death being certified as Nephritis and Violence respectively

Sex.—There was a preponderance of males, viz., 30 to 26 females.

CEREBRO-SPINAL FEVER.

One case of this disease was notified during the year, a male, six months old. The case was treated in the Derby Guardians' Infirmary and recovered.

CONTINUED FEVER.

No cases of continued fever were notified during the year.

POLIOMYELITIS.

Three cases of this disease were reported during the year, two males (1 and 2 years respectively), and one female (aged 8 years). Two patients were admitted to the Children's Hospital, and the other attended the Derbyshire Royal Infirmary as an out-patient.

ENCEPHALITIS LETHARGICA.

Cases notified	• • •	•••	 •••	3
Deaths	• • •		 	2

The notified cases were all males, aged 19, 20 and 49 years respectively. The two fatal cases, aged 19 and 20, were both treated at home, and the onset in each case was stated to have been in 1924. The non-fatal case was treated in the Derbyshire Royal Infirmary.

POLIO-ENCEPHALITIS.

No cases occurred during the year.

MALARIA.

No cases of Malaria were notified during the year.

Deaths	•••		•••	29
Case Mortality	•••		•••	1.36%
Rate per 1,000 living		• • •	• • •	0.21

Measles was very prevalent during the year 1928, and 2,134 cases of Measles and German Measles were notified (1,030 males, 1,104 females), there being 29 deaths. The deaths (with one exception) were of children under 3 years of age. The age distribution of the cases is seen on reference to the Tables on pages 16 and 17. The quarterly incidence of the disease is recorded in the Table on page 18. From this it will be seen that 78.9% of the cases, i.e., 1,682 occurred in the first quarter of the year. 55 cases were removed to the Isolation Hospital, many of them being severe cases with chest complications; 13 of these died, mortality rate was 23.6 per cent.

Arrangements were made with the Royal Nursing Institution for the provision of trained nurses in nine cases with Pneumonia complications. 127 visits were paid to these cases and seven recovered.

CHICKEN POX.

Cases notified	ł	• • •	• • •	• • •	• • •	865
Deaths						Nil.

This disease was notifiable throughout the whole year owing to the prevalence of Smallpox. 865 cases were notified, and all of them were visited either by a Medical member of the Health Staff or by a Health Visitor or School Nurse. Of these cases, it was found that no fewer than 739 (or 85% of the total cases notified) were unvaccinated. Three cases of Chicken-pox had had Smallpox previously.

Age periods and Ward distribution are shown in the tables on pages 16 and 17.

Sex.—There were 405 males and 460 females.

Four cases notified as Chicken pox proved to be Smallpox.

DYSENTERY.

Two cases of Dysentery were notified during the year, one a male aged 25 years, and the other a female aged 21 years.

The male, who was treated in the Derbyshire Royal Infirmary, had been in India from 1923 to 1925, where he was stated to have contracted the disease. The female had been an inmate of the Derby Guardians' Infirmary for three months suffering from Pyelitis and the urine persistently showed a growth of Dysentery B. Flexner, with no clinical symptoms.

The sanitary convenience at each house was a W.C.

WHOOPING COUGH.

During the year 64 cases of Whooping Cough (26 males, 38 females) of which 7 proved fatal, were investigated by the Nursing Staff of the Department.

The ages of the fatal cases were as follows:—

Under	1 year	•••	•••	•••	3
1 to 5	years	 •••	•••	•••	4

SCHOOL CLOSURE.

No schools were closed during 1928 on account of infectious disease.

PUBLIC HEALTH (PREVENTION OF TUBERCULOSIS) REGULATIONS, 1925.

No action was taken during 1928 under the above Regulations relating to tuberculous employees in the Milk Trade.

PUBLIC HEALTH ACT, 1925, SECTION 62.

No action was taken under this Section of the Act during 1928.

REPORT OF THE TUBERCULOSIS OFFICER.

Dr. W. H. Wray reports as follows:-

"I have to report (1) an increase in the number of notifications of tuberculosis over that for the year 1927, and (2) an increase in the number of deaths from tuberculosis.

An increased area and population had to be dealt with from the first of April, 1928, and included in the total number of notified cases of tuberculosis are eighteen from the new area.

Comparative Figures.

,			NOTIFICA	TIONS.	
		1928	1927	1926	1925
Pulmonary Tb		207	175	219	267
Non-Pulmonary Tb.	•••	53	37	30	54
			DEA	THS.	
		1928	1927	1926	1925
Pulmonary Tb		102	78	107	111

It will be seen that the notifications of cases of pulmonary tuberculosis, while increased over 1927, are lower than other years; and the deaths apart from 1927 (the lowest since 1878) are in the same category.

The large increase in the number of notifications of non-pulmonary cases is undoubtedly due to the greater efforts being made to diagnose and treat bone and other forms of tuberculosis. Regarding the increased deaths of non-pulmonary tuberculosis cases, tuberculous meningitis, as I noted last year, accounts for a certain proportion, there being thirteen deaths from this cause in 1928.

Bearing on this latter point I may mention that investigations into the family histories of two children who died from tuberculous meningitis shew that the father in one instance was notified a few weeks later as suffering from pulmonary tuberculosis. In the other case the mother was notified as suffering from pulmonary tuberculosis. In both cases the sputa showed many tubercle bacilli. One is justified in assuming that these children were directly infected by the parents affected.

The family history of cases notified has continued to be investigated, although it is difficult to obtain accurate information. It was found that in 68 of the 207 notified pulmonary cases (32.8%) and that in 18 of the 53 notified non-pulmonary cases (33.9%), near relatives had suffered from tuberculosis.

I may mention a few of the family records believing they will be of interest.

- (1) Female aged 28 years. Tubercle Bacilli in sputum. One sister, three maternal uncles and two maternal aunts had died from tuberculosis.
- (2) Male aged 24 years. Tubercle Bacilli in sputum. Two brothers (positive sputum cases) had died a year or two previously and the patient's daughter died from tuberculous meningitis a short time after his notification.
- (3) Male aged 20 years. Tubercle Bacilli in sputum. Died early in 1929. Two sisters, positive sputum cases, died in 1926 and 1927 respectively.

(4) Mother and two daughters, all positive sputum cases, died within two years.

For a number of years I have been collecting information regarding the susceptibility of what I may call tubercular families to other respiratory diseases. My records show that of the causes of death of 274 close contacts of tuberculous patients, 97 (35.4%) were certified as having died from diseases of the respiratory system.

This susceptibility to Bronchitis, Pneumonia, etc., does not appear to be unduly influenced by the standard of living or the environmental conditions.

Period between notification and death.—Eleven of the 102 patients who died from pulmonary tuberculosis in 1928 had not been notified before death, i.e., 10.8% of the total number of fatal cases.

Comparative Figures :-

1921—8·7%	$1924-10.6^{07}_{/0}$	19278.9%
1922—13.8%	1925-9.0%	
1923—11·1%	1926-9.3%	

Two cases died on the same day as notification and the period between notification and death in the remaining 89 fatal cases in 1928 was as follows:—

Period.	Instances.	Period.	Instances.	Period.	Instances
1 day 2 days 3 ,, 7 ,, 8 ,, 2 weeks 3 ,, 4 ,, 5 ,, 7 ,, 2 months 3 ,, 4 ,,	4 1 1 1 1 1 2 3 2 1 9 3 2	6 months 7 8 9 11 12 13 15 16 17 18 19 20 ,	3 1 5 4 2 1 2 1 1 1 1	21 months 22 ,, 2 years 3 ,, 4 ,, 5 ,, 6 ,, 7 ,, 8 ,, 10 ,, 11 ,, 13 ,, 15 ,,	2 3 11 5 1 1 4 1 2 1 1

Thus 71.6% of these cases died without notification or previous to notification or within two years of notification. Comparative figures:—

1922— $70.6%$	$1925-69\cdot4\%$
1923— $77.0%$	$1926 - 83 \cdot 2 \%$.
1924 - 73.0%	$1927-65\cdot3\%$

Non-pulmonary Tuberculosis deaths.—Seven of the 27 deaths were of non-notified cases (25.9%) as compared with

38.8% in 1927. 38.5% in 1926. 54.2% in 1925.

Four cases were notified on the same day as death and the period between notification and death in the remaining cases was:—

1	day	4	instances.	4	weeks	1	instance.
2	days	2	do.	5	do.	1	do.
4	do.	1	do.	12	months	1	do.
5	do.	1	do.	3	years	1	do.
11	do.	1	do.	13	do.	2	instances.
3	weeks	1	do.				

Infantile feeding and Tuberculosis.—I have continued to investigate the infantile feeding of all actual and suspected cases attending the clinic and the particulars as given in the first thousand cases are as follows:—

	Breast only.	Breast supplemented with other feeding.	Artificial feeding wholly or partially of Cows Milk.	Other feeding (including Dried Milks).	Total.
PULMONARY CASES	184	19	82	64	349
Non-Pulmonary Cases	60	11	23	18	112
Observation Cases	314	38	103	84	539
TOTAL	558	68	208	166	1000

It would be difficult to make any useful deduction from these figures but they may be of interest and useful for comparison.

Housing conditions.—The following are the particulars of the housing conditions of patients notified during the year:—

Type of House.	Pulmonary cases.	Non-pulmonary Cases.	TOTAL.
1 roomed	1		1
2 ,,	4	1	5
3 ,,	3	3	6
	17	6	23
4 ,, 5 ,,	28	5	33
6 ,,	108	29	137
7 ,,	6	3	9
8 ,, and over	9	2	11
Common lodging			
houses	1		1
Houses let in lodgings	1	-	1
Institutions	6	3	9
No record	23	1	24
Totals	207	53	260

In 24 of the 260 cases notified in 1928 there were two or more families to a house. In addition to these, ten other patients were lodgers and in six other instances there were lodgers in the infected household. (These figures do not include the presence in the household of one near relative, e.g., uncle, grandparent, etc.)

Information as to the sleeping arrangements was obtained as follows:—

	Pulmonary Cases.	Non-Pulmonary Cases	TOTAL.
Patients with separate bed and bedroom	66	12	78
Patients with separate bed but not separate bedroom.	21	10	31
Patients with neither separate bed nor bedroom	82	20	102
No record	38	11	49
Totals	207	53	260

Thus out of 211 cases where information could be obtained, only 78 patients (i.e., 36.9%) had completely separate sleeping accommodation. However the figure has shown a constant rise in the last three years, viz.

31.4% in 1926. 33.7% in 1927.

Tuberculosis Clinic.—Details of attendance and results are given in the "Summary" on page 44 and in Table I. "Tuberculosis Scheme" on page 32. This latter is compiled on instructions laid down by the Ministry of Health and its definitions vary somewhat from those given here.

During the year 405 new patients were examined, an increase of 27 on the number for 1927. The number of cases sent by private practitioners showed an increase of 35, being 193 as against 158 in the previous year.

Details are given of the sources from which the new cases came and the comparison with the previous year:—

			1928	1927 figures
From private practitioners	•••	•••	193	158
From Derby Institutions	•••	•••	. 2	7
From other institutions	•••	•••	1	1
Transferred from outside M.O.	H.'s	•••	7	4

Came on own initiative	•••	•••	- Control - Cont	1
From Health Staff	. • •	•••	162	166
From School Medical Officer	•••	•••	39	40
			405	378

This figure, 405, brings up the total number of persons seen at the Tuberculosis Clinic since July, 1912, to 6,963. "Table IV" on pages 35 and 36, gives the condition, where known, at the end of 1928, of the 3,891 notified cases who have attended the Clinic.

Included in the 405 new cases seen in 1928 are 125 "Contacts" (as compared with:—

133 in 1927, 136 in 1926, 100 in 1925). Of this number three were finally diagnosed as suffering from Tuberculosis.

Tuberculosis Sanatorium.—The number of patients admitted to the Tuberculosis Sanatorium during 1928 was 95 (91 pulmonary cases and 4 non-pulmonary cases), as compared with 94 (92 pulmonary cases and 2 non-pulmonary cases) in 1927. The number of child patients admitted was 18 as compared with

20 in 1927 and 37 in 1926.

Twelve patients died in the Institution as compared with:—

13 in 1927.

5 in 1925.

9 in 1926.

1 in 1924.

For details of admissions, discharges and results of treatment, see "Summary" on pages 46 and 47.

The average stay per patient during 1928 was 193.2 days for the 94 cases discharged and 118.9 for the 12 fatal cases.

Comparative figures for the past few years are:

		Disch	narged Cases.	Fata	d Cases.
1922	•••	(121)	196·3 days	(5)	185.6 days
1923	• • •	(98)	198.4 days	(10)	128.9 days
1924		(128)	204.6 days	(1)	136.0 days
1925		(100)	$167 \cdot 1 \text{ days}$	(5)	133·4 days
1926		(93)	176.6 days	(9)	168.6 days
1927	•••	(96)	231 ² days	(13)	62.8 days."

Open-air Shelters.—Shelters were loaned to fourteen patients during 1928, and at the end of the year there were nineteen shelters provided; ten of these were in use, the other nine being under repair.

Ancillary Treatment.—During the year 18 patients received ancillary treatment in the form of a supply of milk daily (11 at one quart, and 7 at one pint). In three instances the supply was terminated on account of the patient's no longer falling within the regulations governing the granting of such assistance; leaving at

the end of the year 15 patients receiving this allowance (10 one quart, and 5 one pint daily).

Work of the Tuberculosis Nurse.—The Health Visitor paid 2,053 visits during the year, 1,760 to eases of pulmonary tuberculosis, 179 to patients suffering from other forms of tuberculosis, and 114 special and miscellaneous visits.

Summary.

NOTIFICATIONS.

Pulmonary Tuberculosis.

Males 127, Females 80, Total 207. Males 30, Females 23, Total 53.

Of the 53 cases of Non-Pulmonary Tuberculosis notified in 1928,

11 were cases of Tuberculous Meningitis.

14 .. . Tuberculosis of the Cervical Glands.

In 12 cases there was tuberculosis of the bone (spine 5, hip 3, hip and knee joint 1, knee joint 1, pubic bone 1, and femur 1). Three cases were notified as general tuberculosis, one as tuberculosis of the skin, one as tuberculous epididymitis, one as tuberculous testicle, and the remainder (10) were cases of abdominal tuberculosis.

Charity Organisation Society.

As in previous years, the Society has given attention to the after-care of certain tuberculous patients, and, according to the information furnished by the Hon. Secretary, was also instrumental in arranging for the treatment of a case at the Hahnemann Home, Bournemouth, and three cases at the Eversfield West Hospital, St. Leonards-on-Sea.

The Hon. Secretary of the Invalid Children's Aid Association (an Allied Committee), reports that 2 children were sent to the Royal Sea Bathing Hospital, Margate; nine children for convalescent treatment, while extra nourishment was supplied to three cases. A supply of clothing was granted in two instances.

In addition to cases of Tuberculosis, etc., the Invalid Children's Aid Association gave very useful help in dealing with young children (including "Toddlers,") especially after Pneumonia and other infectious diseases.

Particulars of Action taken with the Infectious Disease Gases.

^{*}According to admission notices forwarded to Medical Officer of Health.

[†]Removed to the Derby and Burton-on-Trent Joint Smallpox Hospital at Blakeley.

SPECIAL NURSING.

Arrangements have been made with the Nightingale Nursing Home to provide skilled nursing for cases of Pneumonia and Puerperal Pyrexia occurring in the Borough who require it, and also for cases of Pneumonia after Measles.

VENEREAL DISEASES.

During the year the arrangements for the treatment of Venereal Diseases were similar to those described in the Annual Report for 1925.

The following is a summary of the work done during the year 1928:—

Disease.		No. of Peattending th		No. of Attend-ances.	No. of In-patient Days.
Syphilis Soft Chancre Gonorrhœa Other Diseases	•••	Males. 174 31 442 170	Females. 103 1 107 36	2982 189 18525 540	202 44 605 13
Totals	•••	817	247	22236	864

The figures in the above Table include patients from the Borough, as well as from the Counties of Derbyshire, Staffordshire, Leicestershire and Nottinghamshire.

Pathological Specimens.—During the year the following specimens were examined at the Laboratory of the Derbyshire County Council; the figures show the specimens examined from the Treatment Centre of the Venereal Diseases Clinic and those from private practitioners.

	Spiro- chetes.	Gono- cocci.	Wasser- mann.	Others.	
Treatment Centre	Nil.	Nil.	210	Nil.	
Private Practitioners	. Nil.	62	487	10	

The number of new cases shows an increase of 138 as compared with the year 1927, and the total number of attendances at the Clinics shows an increase of 1,951, while the total number of in-patient days had increased by 2. There was an increase of 66 in the number of patients discharged before completion of the first course of treatment. The number of patients discharged after completion of treatment shows a decrease of 29, *i.e.*, from 221 to 192, as compared with the previous year.

A less favourable index is shewn on reference to the number of cases of Ophthalmia Neonatorum, these shewing an increase of 6 as compared with 1927.

MATERNITY AND CHILD WELFARE.

Dr. Annie R. McKail reports as follows:-

"The work of the Maternity and Child Welfare Department has been carried out on much the same lines as in previous years.

The attendances at the Welfare Centres continue to increase, but owing to the growth and development of the town the increase is not distributed evenly over the Welfares. The greatest increase has taken place at Russell Street where 1,776 more attendances were made in 1928, by mothers, than in 1927, causing considerable overcrowding. St. Helen's Street Welfare was also much overcrowded, but the opening of St. Mark's Welfare in October offered some relief. The overcrowding and unsuitability of the premises seriously hamper the development of the work.

As much time as possible has been devoted to systematic teaching of the mothers, and demonstrations and talks have been given by the health visitors on all matters concerning the well-being of the infant and young child.

The Ante-Natal Clinic continues to be well attended, but there is need for another to serve the Russell Street area. Talks and demonstrations have been given frequently.

CHILD WELFARE EXHIBITION.—During Health Week the Child Welfare Exhibition was hired from the Central Council for Infant and Child Welfare. The Exhibition was well attended and special

lectures and demonstrations were given to the mothers and to school children by the Organiser, Miss Keating.

MIDWIVES.—The Midwives practising privately in the Borough undertake about one-third of the midwifery of the town.

In their practice there occurred in the year 3 cases of Puerperal Fever, 2 Maternal deaths, 29 Stillbirths, and 2 cases of Ophthalmia Neonatorum.

Medical Help forms were received from these midwives in 206 cases.

- 9 were for Ante-Natal complications.
- 57 were on account of difficult labour.
- 67 were on account of condition of baby.
- 73 were on account of mother's condition after labour.

55 visits of inspection were paid to the midwives.

The Midwives Meetings have been well attended, and the lectures given by Dr. Ashby, Dr. Elsom, Sister Hodgkinson, Dr. Keatinge, Dr. MacFarlane, and Mr. Stafford were much appreciated by the midwives.

Miss Shillito very kindly entertained the midwives at the Nursery School in November and gave a demonstration of Nursery School methods which proved of great interest to the midwives.

VOLUNTARY HELPERS.—The Voluntary Helpers have again rendered excellent service to the Department and gave very freely of their time during Health Week.

CHARITY ORGANISATION SOCIETY.—The Charity Organisation Society and Invalid Children's Aid Association have again helped us with the mothers and babies in many ways."

MIDWIVES.—No Midwives are employed by the Corporation of Derby, nor is any subsidy paid to them. Periodical meetings have been arranged by the Maternity and Child Welfare Medical Officer (Dr. Annie R. McKail) during the year at which addresses have been given and discussions encouraged. Seventy-seven Midwives gave notice of intention to practise within the Borough during 1928. Six of these were "bona-fide" Midwives. The remainder (71) were certificated women; 27 connected with the

Derby Royal Nursing Institution, &c., 15 connected with the Health Department (including School Nurses), and 13 with a Poor Law Institution. The remainder (16) practised privately, including 4 midwives at private nursing homes.

MEDICAL AID FORMS.—434 reports were received by the Medical Officer of Health during the year. 299 of these were on account of the condition of the mother and 135 of the baby.

MEDICAL PRACTITIONERS.—240 emergency cases were attended by local Medical Practitioners, who were called in by Midwives in cases of emergency, under Section XIV of the Midwives' Act 1918. The total fees paid to the practitioners were £317 0s. 6d.

MATERNITY HOSPITAL.—Under the agreement between The Royal Derby and Derbyshire Nursing and Sanitary Association and the Derby Corporation the sum of £33 18s. 0d. was paid in respect of the maternity fees of 11 necessitous mothers requiring institutional treatment during the year.

BABY INCUBATORS.—Four infants were placed in these incubators during the year.

STILL-BIRTHS.—These numbered 91, (19 being notified by Medical Practitioners and 72 by Midwives). There were 95 burials of still-born children in the Derby cemeteries during the year

MATERNITY AND CHILD WELFARE CENTRES.—There were seven Welcomes or Maternity and Child Welfare Centres in existence in 1928, six of these managed by the Corporation Health Department, and one managed by the Nightingale Nursing Institution.

(1) St. Helen's Street Welcome at Meeting House (provided by the Society of Friends, at a charge of 10/- per week). Meetings for baby weighings, infant consultations, &c., on Wednesday morning and Wednesday afternoon each week.

Two of the Homes registered prior to July 1st, 1928, as Maternity Homes are combined Maternity and Nursing Homes, and have claimed exemption under Section 6 of the Nursing Homes Registration Act, 1927.

One Home registered for Maternity Cases only, in 1927, is now registered also as a Nursing Home.

Nursing Homes Byelaws were issued during the year, based on Model Byelaws of the Ministry of Health.

TODDLERS' CLINIC.

Clinics held during 1928	•••	•••	38
New Cases attended	•••	•••	199
Total attendances	• • •		484

Particulars of treatment given to 78 children referred to the Dental Clinic will be found in the Table on page 58.

ARTIFICIAL FEEDING.

During the year 20 notifications of proposals to substitute Artificial Feeding for Breast Feeding were received in accordance with Rules of the Central Midwives Board. This number was a decrease of 10 as compared with the number received during the year 1927, and is equal to a percentage of 0.71 of the total births.

The reasons for the substitution are given in the following Table. In some of the instances the reasons given are due to preventable causes, such as Abscess of the Breast.

No Lactation, or insufficient	3
Prematurity of Infant	1
Mother to go to work (child illegitimate)	3
Illness of Mother	5
Mother suffering from Tuberculosis	2
Breast Abscess	1
Mother's own initiative	3
Left Breast amputated six weeks previously	1
Making Mother and Baby ill	1

The following deaths have not been included in the above table							
for the reasons stated below:—							
(1) Some congenital defect incompatible with life 194							
(2) Death taking place owing to debility, no food having							
been given 177							
(3) The child being prematurely born 1,180							
(4) Some other cause not associated with the manner of feeding 272							
Total 1,823							
It will be seen then that of the 54,921 infants born during the							
period, 4,706 failed to reach the age of one year.							
Number of children notified during the afore-mentioned							
period 54,921							
From the above the following deductions must be made:—							
(a) On account of no visit being made, or no							
record being obtainable 3,473							
(b) On account of no visit being made, owing to							
death occurring before any information could							
be obtained 403							
3,876							
Net total of children who were under the direct observation							
of the Health Visitors 51,045							
Percentage of children breast-fed 73.9							
,, ,, ,, wholly hand-fed 5.5							
,, ,, partly reared by hand and partly by							
ho natural means 20.6							
Death-rate per 1,000 births of children breast-fed 35.5							
,, ,, ,, hand-fed 154·1							
,, ,, ,, partly breast-fed 105.7							
The death-rate amongst the breast-fed children is 35.5 per 1,000							
births, as compared with 154·1 per 1,000 among those hand-fed and							

The death-rate amongst the breast-fed children is 35.5 per 1,000 births, as compared with 154.1 per 1,000 among those hand-fed and 105.7 per 1,000 amongst those only partly breast-fed. It is important also to note that not only is this marked difference to be seen in the general death-rate, but in every classification there is the same result, the death-rate is invariably lower among the breast-fed children.

CLINICS.

MATERNITY AND CHILD WELFARE.

- (1) Ante-Natal, pp. 50, 54.
- (2) Mothers and Babies' Welcomes, pp. 52-54.
- (3) Toddlers, p. 56.
- (4) Dental, p. 58.

SCHOOL.

- (1) Central Clinic held at 56, St. Helen's Street, for treatment of minor ailments, every morning during the week. Dental Clinic each morning and afternoon. Inspection Clinic, Tuesday and Thursday afternoons. Ophthalmic Clinic, Monday afternoons and Wednesday mornings. Skin Clinic, on Wednesday afternoons.
- (2) Aural and Throat Clinic, also held at 56, St. Helen's Street, each Friday morning.
- (3) Pear Tree Clinic, held at the Pear Tree Council School, for treatment of minor ailments, on Monday and Thursday mornings.
- (4) Brighton Road Clinic, held at the Brighton Road Council School, for the treatment of minor ailments, on Monday and Thursday afternoons.
- (5) Traffic Street Clinic, held on Tuesday and Friday afternoons, for the treatment of minor ailments, at the Traffic Street Council School.
- (6) Firs Estate Clinic, held on Tuesday and Friday mornings, for the treatment of minor ailments, at the Firs Estate Council School.
- (7) Ultra-Violet Ray Clinic, held at Temple House Clinic, every morning and afternoon, with the exception of Wednesday afternoons.
- (8) Ultra-Violet Ray Clinic, held at 56, St. Helen's Street, ten sessions weekly.

TUBERCULOSIS.

Dispensary at St. Mary's Gate Tuberculosis Dispensary (owned by the Derbyshire County Council) on Monday morning, afternoon, and evening, and on Wednesday morning and afternoon. Extra Clinics are also arranged from time to time.

VENEREAL DISEASES.

Clinics held at the Derby and Derbyshire Royal Infirmary and provided by the Infirmary Authorities on Monday and Wednesday evenings and Saturday afternoons for males, and Monday afternoons and Thursday evenings for females.

HOSPITALS PROVIDED BY THE DERBY BOROUGH COUNCIL

- (1) Tuberculosis Sanatorium, provided at Little Chester. Wards for early and later cases and for children, Open-air School, and Recreation Room and Recreation Grounds. Accommodation, 65 beds (including shelters).
- (2) Fever Hospital on site adjoining the Sanatorium. Ward accommodation, 60 beds; this is increased by the provision of verandahs.
- (3) Smallpox Hospital, situated at Blakeley, on a site belonging to the Burton-on-Trent Corporation. Managed by the Derby and Burton Joint Smallpox Hospital Committee. Accommodation, 40 beds. In addition Tents and Shelters are provided.
 - (4) Mental Hospital (496 beds).

OTHER HOSPITALS WITHIN THE BOROUGH.

- (1) The Victoria Memorial Home of Rest. This Institution by agreement takes in advanced cases of Tuberculosis for the Borough (females).
 - (2) Children's Hospital (voluntary). Accommodation, 52 beds.
- (3) Derby and Derbyshire Royal Infirmary (voluntary). Accommodation, 338 beds.
 - (4) Women's Hospital (voluntary). Accommodation, 25 beds
 - (5) Guardians' Infirmary. Accommodation 265 beds.

ISOLATION HOSPITAL REPORT.

(Dr. R. J. O. TAYLOR, Resident Medical Superintendent).

	Scarlet Fever.	Diph-theria.	Measles.	Others.	Total
Remaining in Hospital, December 31st, 1927	21	25	31		77
Admitted during 1928	136	287	55	16	494
Number discharged during 1928	136	268	73	14	491
Number who have died in Hospital 1928	0	12	13	0	25
Remaining under treatment on December 31st, 1928	21	32	<u> </u>	2	5 5
Average stay in Hospital, 1928, days	37	48	25	16	-

Scarlet Fever.

Number	of	Cases	• • •	136
Number	of	Deaths	•••	0

At ages 0—5 years there were 29 cases admitted.

,,	5—10 ,,	,,	42	,,
,,	10—15 ,,	,,	26	,,
••	15 years and ov	er	3 9	

Complications :—

Adenitis	•••	5.5%
Arthritis	• • •	3%
Otorrhœa	•••	Nil.
Nephritis	• • •	Nil.

The following were the chief complications present on admission: Epilepsy 1, Tuberculous Ankle 1, Operation on Nose and Knee 1, Chicken Pox 2, Scalds 4, Otorrhœa 6.

There were two cases of Septic Scarlet Fever.

All cases admitted in the first few days of the disease were treated with Scarlet Fever Antitoxin, and, as a result, a marked diminution in the number of complications was noted.

Throughout the year Scarlet Fever exhibited a very moderate severity.

Diphtheria.

Number of Cases	•••	287
Number of Deaths	•••	12
Case Mortality	•••	4.1%

Eighteen of the Cases were Carriers.

Age period.	Cases	Deaths.
0— 5 years	89	8
5—10 ,,	112	3
10—15 ,,	43	1
15 years and over	43	• • •

DURATION OF STAY IN HOSPITAL OF 12 FATAL CASES.

2—1 hour.	$1-l\frac{1}{2}$ hours.
1—3 hours.	2—5 hours.
2—30 hours.	1—42 hours.
2—3 days.	1—4 days.

Three of the fatal cases received Antitoxin at home.

DAY OF ILLNESS ON ADMISSION (FATAL CASES).

- 0 were admitted on 1st day of illness.
- 0 were admitted on 2nd day of illness.
- 0 were admitted on 3rd day of illness.
- 4 were admitted on 4th day of illness.
- 8 were admitted after 4th day of illness.

Total Cases admitted during 1928—269.

Percentage admitted on:—

	1st	day of i	llness	•••	•••	• • •	1.3%
	2nd	,,	,,		•••	•••	27%
	3rd	,,	,,		•••	•••	23%
	4th	,,	,,		•••	•••	20%
After	4th	,,	,,		•••	•••	28.7%

In other words:—

Admitted before 4th day of illness ... 51.3%Admitted on or after 4th day of illness ... 48.7%

This delay in seeking treatment before the 4th day of illness is greatly to be deplored, as, of necessity, it entails a higher death-rate, constitutional damage, often permanent, and increased expense, by virtue of the larger doses of Diphtheria Antitoxin required and the longer stay in hospital, entailed.

Antitoxin was administered before admission in 40 cases.

CAUSES OF DEATH.

In all cases death was due to heart failure.

The following complications occurred:—

PARALYSIS.

Soft Palate ... 12 Eyes ... 4 Pharyngeal Muscles 3

LARYNGEAL OBSTRUCTION.

Cases ... 30

Tracheotomy ... 5 (3 of whom made a good recovery).

Measles.

Number of cases	•••	55
Number of Deaths	•••	13
Case Mortality	• • •	23.6%
Age period		Cases.
0— 5 years		46
5—10 ,,		8
10—15 ,,		0
15 years and over		1

Owing to limited accommodation, only the worst cases of the disease, and those suffering from complications, were admitted to Hospital during a severe epidemic in the town.

All 13 fatal cases were of the age period 1—3 years, and all died from Broncho-pneumonia, present on admission.

Of the total admissions, 38 cases were admitted with Bronchopneumonia, 2 with Otorrhœa, 1 with Hæmatemesis, 2 with Nephritis and 2 with Purulent Ophthalmia.

Infectious Illnesses among the Staff.

Diphtheria.—No cases occurred. Since early 1926 all nurses entering the service of the Hospital have been subjected to the Schick Test, and since that date no member of the Nursing Staff has contracted Diphtheria.

Scarlet Fever.—No cases occurred. Since early 1927 all nurses have been subjected to the Dick Test. Since that date, no member of the Nursing Staff has contracted Scarlet Fever.

Smallpox.—No case occurred among the staff who willingly consent to re-vaccination.

The general health of the staff has been very satisfactory.

Nurses' Examinations.—During 1928, seven nurses successfully passed Part 1 (Preliminary), of the State Examination for Fever Nurses, held by the General Nursing Council, while four nurses were successful in passing the Final Examination, thus becoming State Registered Fever Nurses. In addition, five nurses passed examinations for the Hospital Certificate on completion of their periods of training.

Increasing variety of cases treated in the Hospital.—The following table is of interest as showing the increasing uses of the Isolation Hospital and the variety of diseases treated during the past six years, as compared with those dealt with during the six years 1903-8 when the Hospital was mainly used for Scarlet Fever or occasionally for Smallpox. These figures show the need for increasing the accommodation for separate diseases by means of small wards rather than by building large pavilions of say two wards. At the present time we have no accommodation for dealing with cases of Puerperal Fever, and often other diseases have to be treated at home because of lack of accommodation.

AMBULANCE FACILITIES.—There are three Motor Ambulances kept at the Borough Isolation Hospital for utilisation for Infectious cases, and Tuberculosis cases when necessary.

Two Motor Ambulances are kept at the Fire Station for accidents and non-infectious cases.

LABORATORY WORK.—The examination of throat swabs, specimens of sputum, &c., is carried out at the Borough Laboratory, Isolation Hospital. Examinations of specimens of Cerebrospinal fluid, blood for Widal's reaction, &c., inoculation experiments and more elaborate investigations, as well as the Wassermann test, are made at the County Council Laboratories, in St. Mary's Gate, at an agreed charge per specimen.

BACTERIOLOGICAL, &c., EXAMINATIONS.—The following is a summary of the examinations made during 1928:—

LEGAL SUMMARY.

Local Acts (containing Sanitary Provisions).

The Derby Waterworks Acts, 1848, 1868, 1873.

The Derwent Valley Water Acts, 1899, 1901, 1904, & 1909.

The Derby Improvement Act, 1879, Part IV.

The Derby Corporation Tramways Act, 1899, Part III.

The Corporation Acts, 1877 (Sec. 60), 1890, 1901, 1913, 1927.

Acts Adopted.

- Public Health Acts Amendment Act, 1890, Part III., came into operation 20th September, 1899.
- Infectious Diseases (Prevention) Act, 1890 (Secs. 7-13), came into operation 20th February, 1902.
- Public Health Acts Amendment Act, 1890, Part II., came into operation 12th December, 1904.
- Public Health Acts Amendment Act, 1907 (Secs. 19, 22, 23, 25, 28, 30, 31, 33, 34-37, 46, 50-58, 60, 62 to 66), came into operation 3rd March, 1910.
- Public Health Acts Amendment Act, 1907 (Section 24 and Part V.), came into operation 9th February, 1915.
- Public Health Acts Amendment Act, 1890, Part V., came into operation 7th February, 1921.
- Public Health Act, 1925, Secs. 13, 15, 18, 20, 22, 23, 24, 25, 26, 27, 28, 30, 31, 32, 33, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 46, 47, 48, 49, 50, 52, 53, 55, came into operation 15th March, 1926.
- Public Health Acts Amendment Act, 1907, Sec 61, came into operation 3rd May, 1926.

Bye-laws, Regulations and Orders.

- 1838. Unsound Meat, Nuisances, etc.
- 1858. Public Baths and Washhouses.
- 1859. Slaughter-houses.

Sanitary Inspection of Town.

During the year 2,309 Preliminary Notices were served in respect of defects in drains, conversion of privies or tubs to water closets, etc., and to abate nuisances under Public Health or Local Acts.

7,032 defects were remedied.

28,915 visits made by Inspectors.

1,074 visits were paid to 854 cases of Infectious Diseases by the male Inspectors.

TUB CONVERSION SCHEME.

Section 163, Derby Corporation Act, 1901.

Notices served during 1928 (July to December)	•••	462
Number of Tubs dealt with	•••	1,171
Number of Tubs converted to W.C's	•••	572
Certificates issued by Chief Sanitary Inspector	•••	165

Conversions covered by these Certificates 421

Total amount contributed by Corporation at £8 per conversion £3,368

Total cost of Conversions as per accounts submitted £7,067 9s. 2½d.

During the year 1928 the Corporation, on the recommendation of your Committee, decided to put in force their powers under Section 163 of the Derby Corporation Act, 1901, and to call for the conversion of all existing tub or pail closets within the Borough to water closets, with the exception of certain closets certified to be in such a state, owing to their dilapidated or ruinous condition, as to be incapable of conversion—these exceptions being dealt with under Section 36 of the Public Health Act, 1875.

It was estimated at first that there were about 1,800 tub closets to be dealt with, for which a sum of money was borrowed sufficient to cover all reasonable charges, but owing to certain deductions this number has been reduced to approximately 1,650 to 1,700.

As an inducement to secure the co-operation of the owners in this general conversion scheme, a sum of eight pounds was offered as a Contribution by the Corporation towards the cost of each conversion made, this being regarded as a reasonable and generous allowance towards the cost of a normal conversion. In many cases this amount was over 50 per cent of the cost, while in other cases it was below that proportion, although in respect of the latter, the cost was greatly increased in many instances owing to additional works being carried out by the owner which were beyond the scope of the conversion alone.

The first notices were issued in July and by the end of the year 462 notices had been served affecting 1,171 tub closets. Of these 572 had been converted by the end of December, while a great many others were in varying stages of completion. 165 certificates of the satisfactory completion of the works required were issued by the Chief Sanitary Inspector, on the production of a statement of costs by the owners, affecting 421 conversions. The total sum contributed by the Corporation towards the cost of these conversions at £8 per conversion was £3,368 while the total costs of the works as supplied by the owners, were £7,067 9s. $2\frac{1}{2}$ d.

As before stated, the contribution in many cases was in excess of one half the cost, while in others it was below that proportion.

Distinguishing between these, the total contributions and costs in each case were as follows:—

Conversions where amount of contribution was less than half cost:—

Number of Closets converted...187Total Contribution...£1,496 0s. 0d.Total Costs......£3,862 6s. $1\frac{1}{2}$ d.

Conversions where amount of contribution was more than half cost:—

In several cases the Owners have preferred to put in an entirely new system of drainage and erect new W.C. structures against the houses, leaving the old tub structures to be used as sheds, etc., and in many other instances owners have erected new W.C's. against the houses in preference to converting the old structures at the bottom of the gardens, and further, many owners have extended operations by erecting new coal-houses with the new W.C's. This has, of course, greatly increased the cost of the work, and, eliminating these extra charges and striking an average cost, it will be found that the grant of £8 per conversion approximates very nearly to one half of the cost. In many instances, owing to local circumstances, it will be found necessary to abolish the old structures and use a portion of the old materials in the erection of new W.C's adjoining or near to the houses. proceeding was generally necessary on account of the distance of the tub closets from the existing drainage system, or to the impossibility of connecting the new W.C's to the existing drains owing In these cases, in order to convert the existing tub to want of fall. closets to water closets it would have been necessary to lower and relay the whole of the existing drainage system, a proceeding more costly than the erection of new W.C's within easy reach of the The few cases selected, the details of which are house drains. submitted above, emphasise the great diversity in the costs of these conversions.

One case of Smallpox occurred during the year. The patient was removed to Hospital, and no further outbreak occurred.

Overcrowding.

The records of the Department which show overcrowding are the result of enquiries made by the health visitors and sanitary inspectors into certain cases of infectious diseases.

The following list gives some typical examples:—

Scarlet Fever, case 130, 4-roomed house; 2 families; 10 occupants (four adults and six children aged 2 to 16 years).

- pants (four adults and six children aged 1 to 8 years).
- ,, ,, 282, 5-roomed house; 1 family; 12 occupants (four adults and eight children aged 18 months to 19 years).

- Diphtheria, case 124, 2-roomed house; 1 family; 6 occupants (two adults and four children aged 1 to 8 years).

 " 65, 3-roomed house; 2 families; 7 occu-
 - ,, 357, 4-roomed house; 2 families; 12 occupants (four adults and eight children aged 5 weeks to 12 years).

aged 1 to 16 years).

pants (four adults and three children

- ,, ,, 257, 5-roomed house; 2 families; 9 occupants (four adults and five children aged 1 to 10 years).
- ,, ,, 64, 6-roomed house; 2 families; 12 occupants (four adults and eight children aged 1 to 19 years).
- Measles, case 573, 2-roomed house; 1 family; 9 occupants (two adults and seven children aged 1 month to 17 years).
 - ,, ,, 250, 3-roomed house; 2 families; 9 occupants (three adults and six children aged 13 months to 14 years).
 - ,, ,, 1243, 4-roomed house; 2 families; 13 occupants (four adults and nine children aged 11 months to 16 years).
 - ,, ,, 611, 5-roomed house; 2 families; 9 occupants (six adults and three children aged 5 to 15 years).
 - ,, ,, 1389, 6-roomed house; 2 families; 13 occupants (four adults and nine children aged 1 to 10 years).
- Pneumonia, case 322, 3-roomed house; 1 family; 11 occupants (five adults and six children aged 11 weeks to 18 years).
 - ,, ,, 174, 4-roomed house; 1 family; 12 occupants (three adults and nine children aged 1 to 20 years).

- Pneumonia, case 49, 6-roomed house; 1 family; 13 occupants (three adults and ten children aged 5 months to 18 years).
- Chicken Pox, case 434, 5-roomed house; 1 family; 10 occupants (four adults and six children aged 4 to 20 years).
 - ,, ,, 810, 6-roomed house; 2 families; 13 occupants (five adults and eight children aged 5 to 20 years).
- Tuberculosis, case 158, 3-roomed house; 1 family; 7 occupants (two adults and five children aged 1 to 8 years). One other case of tuberculosis in family.
 - "," 117, 4-roomed house; 1 family; 8 occupants (two adults and six children aged 5 to 20 years). Two children reported in delicate health.
 - ,, ,, 107, 5-roomed house; 1 family; 10 occupants (four adults and six children aged 2 months to 18 years). Two other cases of tuberculosis in family. Patient has tubercle bacilli in her sputum.
 - ,, 316, 6-roomed house; 2 families; 11 occupants (four adults and seven children aged 8 months to 20 years).

Application for New Corporation Houses.—The following are extracts from letters received at the Health Office during 1928 from applicants for new Corporation houses, and indicate the unsatisfactory conditions under which they are compelled to live:—

- (1) "We are living in one room having to use it as a bed and living room, also for washing and drying. The condition is unhealthy for the baby is always ailing. We have been in rooms for sixteen months."
- (2) "We occupy two rooms, there are my wife, self and four children, and the six of us are in one bedroom."

- (3) "We occupy two rooms. My husband and myself and three children sleep in one bedroom, four of us in one bed, and one in a cot. I have been in these rooms five years."
- (4) "My wife and I have been in rooms since we were married 6 years ago. We have two children, aged 5 years and 7 weeks respectively. There are three families living in the house where we are, and we have been told to get out as soon as possible. My wife's health is beginning to break up with the worry and the cramped conditions."
- (5) "I am residing in two rooms, with my wife and two children, girls. We all have to sleep in one bedroom. I can see one of my girls age 11 failing in health gradually."

Inspection of Workplaces.

In addition to Inspections of Workrooms where women and young persons are employed, visits, to the number of 92, were paid by the Female Sanitary Inspector, to such workplaces as Cafés, Restaurants, Retail Shops, &c.

Inspection of Out-workers or Home-workers.

Pursuant to Section 107 Factory and Workshop Act, 77 lists of out-workers have been received from the various firms in Derby. Of the out-workers, 111 were engaged in net-mending, 79 in altering, making or finishing wearing apparel, 2 in sack seaming, and 8 making surgical bandages. Five lists have been received from other Councils giving 5 names of out-workers employed by firms in their District, who reside in Derby, and 27 lists with 201 names have been forwarded to Councils in whose Districts out-workers employed by Derby firms reside. During 1928, 388 visits to the homes of these out-workers were made by the Female Sanitary Inspector. As a result of these visits 12 verbal notices were given with regard to unwholesome premises.

Public Conveniences.

The five Public Conveniences for the use of women are inspected regularly by the Female Sanitary Inspector, the Central ("Spot") convenience being inspected daily, the total visits paid during the year being 424.

DERBY RAINFALL, 1928.

We are indebted to Messrs J. Davis & Son for the following Table:—

According to the return of rainfall experienced at Derby during the past year, and taken by Messrs. John Davis and Son, All Saints' Works, there were 213 rainy days in 1928. The amount of rain which has fallen is 29.05 inches, which is 0.91 (inches) above that of the average of the twenty years 1900-1920. The detailed figures are as under:—

	DERBY.				DUFFIELD.

Water Supply.

Number of gallons of water supplied to Derby	from
Public Supply	1,698,796,000
Gallons per day per head of population	32.96
Percentage of total quantity from the Derv	vent
Valley Supply	83%

Thirty samples of well water were taken from 28 wells in the added areas of Old Normanton and Chaddesden. On analysis, only three of these samples were reported as being fairly satisfactory for use for drinking purposes, the remainder being found unfit, undesirable or unsatisfactory for drinking purposes. Four preliminary notices were served and four wells were closed and town's water laid on in these cases. In the remaining 24 cases, verbal notice was given, but in only one case was the well closed and a supply of town water laid on, no action being taken in respect of the remainder.

Six wells, affecting 8 houses in the Alvaston District were also filled in and town water laid on. All these wells were closed in connection with the conversion of privies to water closets.

Two samples of well water were obtained from dairies for analysis, and particulars regarding these will be found under the Section on Dairies, Cowsheds and Milkshops on page 97.

A sample of town water was taken for analysis from a house where a case of Enteric Fever had occurred. This sample was satisfactory in all respects.

A sample was also taken from a cellar and on analysis was found not to be a supply from the water main. The source of the water was traced to a defective drain, which was remedied.

PRIVATE WATER SUPPLIES.—The records of the Borough Surveyor's Department show that the number of houses in the Borough supplied from private sources (wells) is approximately 70, principally in the outlying parts and the Alvaston District.

Smoke Nuisances.

270 observations have been made during the year with a view to discovering the chimneys most prone to the emission of smoke in such quantities as to be an offence against the provisions of the Public Health Act, 1875, and the Public Health (Smoke ABATEMENT) ACT, 1926. Several chimneys were found to be discharging smoke in excessive quantities and these will be further watched with a view to taking any such further proceedings as may be necessary to secure an abatement of these nuisances. chimney in particular was found to be discharging dense black smoke in such quantities as to warrant further preliminary action being taken. It was found that the smoke was being emitted from the chimneys of two small vertical boilers, but as arrangements were being made to use a large Lancashire Boiler and tall chimney, further proceedings were allowed to stand in abevance. arrangements were carried out, and on further observations being taken, it was found that the emission of preventable smoke was greatly reduced.

```
The result of these further observations were as follows:—
Iron Chimney to vertical boiler No. 1.—
Observation 30 minutes ... Result 2 minutes dense smoke

Meat Inspection.

During the year 46 carcases of beef were condemned for the following reasons:—20 tuberculosis, 1 black quarter, 1 nephritis, 12 Johne's disease, 5 fevered condition, 3 dropsical, 2 injury and 2 septic conditions.

Included in the above, are the carcases of 3 cows slaughtered by the Derbyshire County Council (under the Tuberculosis Order) which were condemned.

There have also been condemned 13 carcases of veal and 29 bodies of mutton, 2 of which were unfit through injury, 3 difficult parturition, 21 emaciated from fluke disease, and 3 lymphadenitis.

The number of Tuberculous cattle was 86 cows, 17 heifers, 4 bullocks and 2 bulls.

Public Abattoir.—Slaughtering at the Corporation Houses is under the direct control of the Health Department.

Meat Regulations. 1924.

These Regulations have now become routine matters and have wrought changes for the better in the meat supply of the town. Particularly is this so in regard to the control of those cases of emergency slaughter, which occur from time to time wherever farm stock is kept.

For many years much difficulty has been experienced by most large towns in dealing with illicit traffic in animals slaughtered on farms and in knackers' yards. This traffic has been reduced to a minimum by the fact that animals intended for human food may not now be slaughtered in knackers' yards, and if an animal is intended for human food, three hours' notice of slaughter must be given to

the Local Authority, or in the case of emergency slaughter as early as possible after slaughter.

The meat traders as a whole have carried out the requirements of the Regulations in a very creditable manner. There are, however, a few butchers whose methods of dealing with meat at the Slaughterhouse and in transit leave something to be desired even when not actually infringing the Regulations.

Eleven butchers' shops in the more densely populated and poorer parts of the town are open for the sale of meat on Sundays. This, with the fact that during the year over 2,000 cattle, sheep and pigs are slaughtered on Sundays, has entailed a very considerable amount of Sunday duty.

The large number of purveyors registered during the year is accounted for by the inclusion of persons selling bottled milk only, the demand for such milk having considerably increased.

Five purveyors and seven cowkeepers have been registered in the extended Borough area.

One application for Registration as a retail purveyor of milk was refused under the provisions of Section 2 of the Milk and Dairies (Amendment) Act, 1922, owing to the unsuitability and insanitary condition of the premises and surroundings.

Two samples of well water were obtained from dairies for analysis, one of which was found to be contaminated with animal matter. The water was used for cooling and general purposes; its use has since been restricted to cooling purposes only, a supply of town water being laid on for other purposes.

In the other cases the water was found to be satisfactory for the purpose, the principal fault being its extreme hardness.

The eighteen months' notice under Article 12, Part V. of the Milk and Dairies Order, 1926, requiring every cowshed and every building used for keeping milk, to be provided with a sufficient number of windows or other openings to secure adequate lighting and ventilation, expired during the year.

Under this order additional light and/or ventilation has been provided in three cowsheds.

Sale of Food and Drugs Acts.

During the year, 245 samples were submitted to the Borough Analyst for examination. 170 were "Official" samples, and 10 (or 5.9%) of these were adulterated. The remainder, 75, were "Informal" samples, 5 (or 6.7%) being adulterated.

The following is the summary of the Borough Analyst (Mr. John White, F.I.C.), for the year 1928:—

Official Sam	ples.		Informal Sa	mples.	,
Articles.	Total.	Adult- $erated.$	Articles.	Total.	Adult- erated.
Butter Cream Margarine Milk Sausages	5 144		Candied Peel Coffee Essence Condensed Milk Cream Crystallised Fruit Dried Fruit Flour, Self-raising Lard Lemon Juice Lemon Squash Milk Raisins Sausages Wine, Non- Alcoholic	2 5 20 1 1 5 12 1 2 4 1 18	- - 1 - - - - 1 3

The average composition of the 148 samples of milk:—Non-fatty solids, 8.67; Fat, 3.59; Total solids, 12.26.

Adulterated Samples.

Cream.—0.07% (informal); 0.026% (formal) Boric Acid.

Milk.—2%; 3%; 3%; 5%; 12%; 6%; 6% Deficient in non-fatty solids.

Sausages:—The Public Health (Preservatives in Food) Regulations, 1925.

The amount of Sulphur Dioxide permitted by the Regulations is 450 parts per million. Four samples of Sausages were found to contain an excess of this amount, namely, 600, 1,400, 800, and 1,500 parts per million respectively

Two samples of sausages were found to contain Boric Acid as follows:—9·1 and 10·5 grains per pound respectively. The use of Boric Acid is not permitted by the above Regulations.

All milk samples examined under Food and Drugs Act were free from preservatives.

FERTILISERS AND FEEDING STUFFS ACT.

During the year 9 samples were examined under this Act consisting of the following materials:—

Cotton Cake	• • •	1
Dairy Nuts	•••	1
Linseed Cake	•••	1
Maize Meal	•••	3
Oats (Ground)	•••	3
		9

The whole of the samples were found to be genuine and of satisfactory quality, and to contain no admixture of foreign materials.

MILK FOR EXPECTANT AND NURSING MOTHERS AND FOR INFANTS.—The following amounts were supplied during the year :—

		Sold at	Supplied	
		cost price.	$\overline{\text{free}}$.	Total.
Dried Milk	•••	 $7,346\frac{1}{4}$ lbs.	$1,932\frac{1}{2}$ lbs.	9,279 lbs.

BACTERIOLOGICAL EXAMINATION OF MILK FOR TUBERCLE BACILLI.

During the year 18 samples of milk were examined for Tuberculosis.

Three of the samples submitted were found to be tuberculous. Two were of milk from byres in the Borough of Derby, and the cows were dealt with under the Tuberculosis Order, 1925. One sample of milk sent in from the County was found to be tuberculous. It was afterwards found that the milk had been mixed with other milk, the source of which could not be traced. Further samples were found to be free from Tuberculosis.

The milk sold in Derby during the year has been remarkably free from Tuberculosis, and has been of excellent quality.

Milk and Dairies Order, 1926.

For the purposes of this Order an examination of cattle within the Borough was carried out during the months of June and December by Mr. J. McClement, M.R.C.V.S.

250 examinations of cattle were carried out, and generally speaking, were found to be in good condition. Two cows showed definite

clinical signs of tuberculosis. The farmers decided to have the animals slaughtered under the Tuberculosis Order, 1925. The cows were slaughtered and found to be affected with Generalised Tuberculosis and both carcases were condemned as unfit for human food.

The milk from three cows was found to contain pus or streptococci and was held up as unfit for human food until found free from same.

INCREASE OF RENT AND MORTGAGE INTEREST (RESTRICTIONS) ACT, 1920, AND THE RENT AND MORTGAGE RESTRICTIONS ACT, 1923.

Only one application for a certificate under Section 2 (2) of the Act of 1920 was made during the year, which was granted.

This had reference to the condition of a house and shop purchased by the Corporation for demolition purposes for street improvements, an adjoining house being demolished. This demolition resulted in certain damage being done to the house in respect of which the application was made. The conditions had previously been dealt with by the Health Committee and the matter referred to the Estates and Improvement Committee.

SLUM CLEARANCE.

During the year the Council petitioned the Ministry of Health under the Housing Act of 1925 for an order confirming schemes made by them for the improvement of two areas:—

- (1) An area bounded on the North by Nuns Street, on the South by Bridge Street, on the East by Green Street and on the West by Brook Street.
- (2) An area bounded on the North by River Street, South by Bridge Gate, East by Duke Street, and the West by Darley Lane.

An inquiry was held in October, and some of the principal details from a Public Health standpoint are appended:—

IMPROVEMENT SCHEME No. 1.

Number	of	houses	•••	• • •	• • •	120
Number	of	occupants			• • •	482

The following are the Vital Statistics for the years 1900-27 inclusive, relating to this area as compared with the whole Borough:—

	Whole No. 1 Borough. Scheme. Excess.
Birth Rate	$22 \cdot 0 \qquad 33 \cdot 4 \qquad 11 \cdot 4$
General Death Rate	13.21 19.06 5.85
Infant Mortality	86.57 123 36.43
Infectious Diseases Death Rate	0.31 0.24 *
Measles Death Rate	0.2 0.7 0.5
Pneumonia Death Rate	0.7 1.2 0.5
Tuberculosis (All forms) Death Rate	the 1.23 2.15 0.92
Infectious Diseases Incidence	6.8 10.9 4.1
Tuberculosis Notifications Incidence	e 1.98 2.74 0.76
* 0.0	07 deficit.

IMPROVEMENT SCHEME No. 2.

Number	of	Houses	• • •	•••		• • •	86
Number	of	occupant	ts	• • •	• • •		379

The following are the Vital Statistics for the years 1900-27 inclusive, relating to this area as compared with the whole Borough:—

	Whole	No. 2	
	Borough	. Scheme.	Excess.
Birth Rate	$22 \cdot 0$	37.9	15.9
General Death Rate	$13 \cdot 21$	22.5	9.29
Infant Mortality	86.57	137	50.43
Infectious Diseases Death Rate	0.31	0.40	0.09
Measles Death Rate	0.2	0.5	0.3
Pneumonia Death Rate	0.7	$1 \cdot 7$	1.0
Tuberculosis (All forms) Death Rat	e 1·23	$2 \cdot 31$	1.08
Infectious Diseases Incidence	6.8	6.5	*
Tuberculosis Notifications Incidence	e 1.98	2.05	0.07
* 0:	3 deficit.		

In connection with these Improvement Schemes the Corporation intended making provision for the re-housing of the tenants who would have been displaced by the Schemes.
